

XIAMETER® PMX-200 Silicone Fluid, 0.65 - 2 cSt

Polydimethylsiloxane base fluid

FEATURES

- Good dielectric properties
- · High water repellency
- High shearability without breakdown
- High compressibility
- · High spreadability
- Low surface tension
- · Low fire hazard and reactivity
- Low vapor pressure
- Good heat stability
- · Good leveling and easy rubout
- Essentially odorless and nontoxic
- Soluble in a wide range of solvents
- Volatile carrier
- Compatible with a wide range of cosmetic ingredients

BENEFITS

For personal care:

- Soft feel and subtle skin lubricity
- Excellent spreading
- Leaves no residue or buildup
- · Transient effect
- Nongreasy feel

For industrial applications:

- Little change in physical properties over a wide temperature span – a relatively flat viscositytemperature slope, and serviceability from -40°C up to 200°C
- Low surface tension readily wets clean surfaces to impart water repellency and release characteristics

COMPOSITION

- · Polydimethylsiloxane fluid
- Chemical composition (CH₃)₃SiO[SiO(CH₃)₂]_nSi(CH₃)₃

APPLICATIONS

- Personal care products such as antiperspirants, deodorants, hair sprays, cleansing creams, skin creams, lotions, bath oils, suntan products, nail polishes
- Industrial applications such as glass vial and lens coatings, household product ingredients, mechanical fluids, penetrating oil ingredients, surface active agents, coatings, electrical insulating fluids and polish ingredients

DESCRIPTION

XIAMETER® PMX-200 Silicone Fluid is a polydimethylsiloxane fluid commonly used as a base fluid in personal care products due to its excellent spreading and unique volatility characteristics. It is clear, tasteless, essentially odorless and non-greasy. Unlike other volatile carriers used in the personal care industry, this volatile silicone fluid does not cool the skin when it evaporates, a consequence of its unusually low heat of vaporization.

XIAMETER PMX-200 Silicone Fluid, 0.65 cSt, is a volatile fluid with an appreciable vapor pressure at ambient temperature.

Commercial bulk-polymerized dimethyl silicone fluids, such as XIAMETER PMX-200 Silicone Fluids, typically contain trace amounts of impurities.

HOW TO USE

XIAMETER PMX-200 Silicone Fluid may be used alone or blended with other cosmetic fluids to provide a fluid base for a variety of cosmetic ingredients. It feature good solubility in most anhydrous alcohols and in many solvents used in cosmetics.

PRODUCT SAFETY INFORMATION

XIAMETER PMX-200 Silicone Fluid may cause temporary eye discomfort.

Use caution when handling volatile fluids at temperatures within 10°C of the quoted flash point.

XIAMETER PMX-200 Silicone Fluid with viscosities below 5 cSt are flammable. Keep away from heat, sparks, open flames and other sources of ignition. Keep container tightly closed.

At elevated temperatures, XIAMETER PMX-200 Silicone Fluids are sensitive to contamination by strong acids, bases, some metallic compounds and oxidizing agents. These contaminants may cause an accelerated rate of volatile byproduct formation. Oxidizing agents can also cause an increase in fluid viscosity. When these conditions may exist, it is recommended that the flash point of the fluids be checked periodically to monitor operational safety. Also, ignitable conditions may exist if the fluid is giving off smoke.

TYPICAL PROPERTIES

Specification Writers: These values are not intended for use in preparing specifications. Please contact your local XIAMETER® sales representative prior to writing specifications on this product.

Test	Unit	Value
